

## Technical Specification Kit Bolts and Nuts

### General Info

All bolts and nuts will be conical with a 60° angle, and the nuts will be open in the upper part. Bolts will have 17 hex key heads while nuts will have 19 hex key heads.

### Material & Resistance Class

All bolts and nuts are made of galvanized steel (white zinc plating) with a strength class of 10.9 (class 10 for the nuts). They have a silver (white zinc plating) finish, consistent across all types of bolts and nuts. The fastening elements we will offer are all from an Italian manufacturer with TUV certification.

### Recommended Safety Guideline

Based on the results of tests conducted with and for TUV, we suggest replacing the fastening elements after 12-15 cycles of use. This recommendation is made to consistently maintain the highest level of safety.
